

## February Newsletter

### ETB-Pegasus loves the Valentines month

Hello everyone,  
I hope you had an enjoyable February. It's a short month and time flies when your having fun. Here's what we got up to.

ETB-Pegasus visited Mc Timoney practitioner Jodie Leaker to profile her horse a second time as part of her strategy to monitor his injury treatment. This time we also used the new ETB-Pegasus Cannon Angle Analysis and its additional information proved invaluable to objectively understanding the compensatory mechanisms of the injury of this horse and so future monitoring should be much more interactive.

Jodie Leaker and her horse

ETB-Pegasus visit sponsored rider Anna Ross-Davies to profile the first of her horses for 2010. I really enjoyed the day, watching horses work, discussing the results and what it means we should be focusing on with each horse for the future. The most exciting thing will be seeing the 'picture' after a few profiles.

ETB-Pegasus exhibit at the Horses Inside Out Conference. The lectures were interesting and the enthusiasm from the attended delegates about our products was overwhelming. We look forward to many more like that!

# HORSES INSIDE OUT

*Understanding How Your Horse Works Improves Performance*

ETB-Pegasus visit Just Dressage magazine competition winner Julia Skippen and her now up and coming dressage, ex-racehorse Icarus, know as Poker Player.

Julia and Poker Player ready for their profile (left) and at Stourhead show where he came 2nd in the ex-racehorse class (right).

ETB-Pegasus visit Nottingham Trent University for an equine undergraduate dissertation. I spent the day data collecting for a BSc research project. As mentioned in my January newsletter the project involves comparing data collected from our ETB-Pegasus Limb Phasing system while a horse completes a dressage test with the judges marks and comments. Even now, I can say, it will be an interesting read!

Some photos of horses during the dressage test wearing the ETB-Pegasus Limb Phasing equipment - brushing boots and GPS sensor - it's that easy!

ETB-Pegasus visit the Pencoed campus of Bridgend College. We discussed the theory of our Limb Phasing system, saw it in use, analysed the results and discussed how the information could be practically applied to the horses training. The students were very pleasant and full of detailed questions – a good sign I feel, as it means they were comfortable enough with the basics to apply lateral thinking.

And finally.....

**ETB-Pegasus will be organising Digital Motion Analysis training events in the forthcoming future. People such as Kathryn Nankervis from Hartpury College Therapy Centre and Sandie Chambers from Equestrain Edge amongst others will be lecturing. For dates, venues and lecture content keep an eye on our website [www.etb-pegasus.com](http://www.etb-pegasus.com).**
